

Third-Party & Vendor Risk Management Platform

IT vendor risk management (IT VRM) is the discipline of addressing the residual risk that businesses and governments face when working with external service providers, IT vendors, and related third parties. The scope typically addresses risks related to data protection, business continuity, security, and other risk domains as relevant to laws, regulations, and industry practices.

As with any other risk management program, operational efficiency is critical to the success and sustainability of a strong vendor risk management program.

6clicks provides a comprehensive risk management platform covering the full vendor lifecycle, from onboarding and inherent risk analysis to ongoing monitoring and issue management. 6clicks advanced capabilities for automating assessments, on-site audits, and issues management help improve your efficiency.

Sourcing, procurement, and vendor management leaders can use this datasheet to better understand how 6clicks automates and supports the identification, assessment, analysis, remediation, and monitoring of the information and operational risks associated with an organization's use of IT vendors across a broad set of industries and geographies.

Outbound vendor management features

- Support for unlimited vendors
- Risk assessments, audits, and lifecycle monitoring – including linking vendors to key risks in your risk
- Streamlined vendor onboarding via configurable form that your stakeholders can submit to your TPRM team
- Automated vendor tiering, pre-qualification, and initial due diligence assessments based on submitted vendor form details
- Batch delivery of vendor assessments
- Workflow & notification engine, including recurrence for longer term vendor engagements
- Issue tracking and remediation
- Single, centralized vendor directory
- Reporting & dashboards for insights, trends, and analytics

Inbound vendor response features

- Proactively build trust with careful disclosure of your organization's security posture through the 6clicks Trust Portal in read-only format
- Share completed assessments, audits, and internal controls with relevant external stakeholders, such as auditors, regulators, and customers
- Support for custom terms & conditions required for attestation prior to gaining access to your Trust Portal profile
- Reduce the burden of responding to inbound assessments by proactively publishing relevant information about your program to a Trust Portal profile
- Support for multiple, shareable profiles – including a public profile option for sharing information quickly and efficiently.

The benefits

With support for unlimited vendors, 6clicks will scale with your organization by aggregating your vendor data, automating your assessments, and helping you gain control over your vendor risk management process.

6clicks empowers you with a comprehensive view of all vendor data to manage risk, spend, contract information, obligations, and documents in one location.

Efficiently onboard and tier new vendors to your program by auto-populating vendor details and requirements through our onboarding form submission and pre-qualification scoping questionnaire.

Easily identify and raise the visibility of issues, collect details, and store all communication in case of audits or future issues.

Meet industry or geographically-specific requirements.

Streamline pre-contract inherent risk analysis and due diligence for new vendors with surveys and questionnaires that allow you to conduct automated third-party assessments, onsite audits, and surveys to monitor ongoing risk.

Provide your vendors easy access and a streamlined interface for expeditious response at no cost, negating the need for version control, emails, and miscellaneous messages.

Leverage reporting and dashboards for comprehensive visibility into trends, risk, and status of all vendors. Compare performance and drill down into details to understand sources of risk.

Integrations

The 6clicks IT Vendor Risk Management Solution fulfills our vision of platform extensibility, allowing you to capitalize on technology investments you've already made.

With the release of the 6clicks Developer API, you'll have the ability to seamlessly push and pull data between 6clicks and applications such as your CRM, contract management system, ticketing system, vendor telemetry subscriptions, etc.

The list of supported technologies will be limitless and will include opportunities to integrate with solutions like:

- Adobe Acrobat Sign
- Dow Jones
- Okta
- Salesforce
- SWIFTRef
- AWS
- Dun & Bradstreet
- OneLogin
- SAP Ariba Solutions
- ThreatConnect
- Argos Risk
- EcoVadis
- Oracle (NetSuite)
- SAP Ariba
- TINCheck
- BitSight
- Interos
- Orpheus Cyber
- SAP
- UpGuard
- Black Kite
- Ironclad
- Osano
- Security Scorecard
- Workday
- Clearbit
- Jira Software Cloud
- Ping Identity
- ServiceNow
- ZoomInfo
- Cortex XSOAR
- Jira Software
- RapidRatings
- Slack
- Coupa
- Microsoft Azure
- Recorded Future
- Snowflake
- Darkbeam
- Microsoft Office
- RiskRecon
- Splunk
- DocuSign
- Microsoft Power BI
- Supply Wisdom
